

Case / Scan ID:	LCT-85725	Patient Case:	ANONYMOUS (Clinical Study)
File Name:	test_ct_slice.png	Analysis Model:	DeepLabV3+ Multi-Scale ASPP (Salt-Pepper + RVIN)
Modality:	Computed Tomography (CT)	Report Status:	COMPLETED (AI-Generated)

CT Scan Imagery & Diagnostic Overlay

Figure 1: Original CT Scan
Input diagnostic image

Figure 2: Annotated CT Scan (Amber: Salt & Pepper | Purple: RVIN)

Quantitative Noise Classification & Metrics (Model 3 (DeepLabV3+))

Noise Classification	Pixel Count / Prob.	Severity / Score	Clinical Classification
Salt & Pepper Noise (Impulse)	20,039 px	7.64%	MODERATE
RVIN (Random-Valued Impulse)	8,444 px	3.22%	MILD
Clean Signal Region	0 px	89.13%	Normal / Target
TOTAL NOISE (Model 3)	28,483 px	10.87%	MODERATE

Clinical Interpretation & Denoising Recommendations

Model Assessment (Model 3 (DeepLabV3+)): Moderate noise contamination identified (10.9%). Low-contrast tissue borders and ground-glass opacities may exhibit minor graininess.
Radiologist Action: Recommend applying edge-preserving bilateral or non-local means denoising filters prior to diagnostic sign-off.

Radiologist Review Block	AI System Validation Specs
Reviewing Radiologist Signature	Architecture: DeepLabV3+ ASPP (Jahnavi.pth) Dilation Rates: [1, 6, 12, 18] + Decoder Classes: Salt-Pepper, RVIN Noise

Disclaimer: This report was automatically generated by Model 3 (DeepLabV3+) for multi-noise classification and severity assessment in educational & research environments. Findings should be cross-referenced by a qualified medical professional prior to clinical intervention.
